NOTES:

1. Bearings and distances shown in parenthesis, indicates recorded as data.
2. This Plat of Survey was prepared to create a legal description for an exchange of land between adjoining land owners.
3. Bearings are referenced to the East line of the SE 1/4 of Section 14, which bears S0°36'15"W, according to the Green County Coordinate System, as defined by the Wisconsin Department of Transportation and determined by GPS observation, 1997 Adjustment.
4. The Center of Section 14 was first established back on May 14th, 1849 by District Surveyor Samuel Spangler, as filed in Volume 1, Page 29 of County Surveyor Records. The Statutory Location for the location of the Center of Section back in 1849, was determined by connecting straight lines to the corresponding opposite quarter corners. County Surveyor A.L. Cleveland worked in this section back on December 25th, 1870 (Volume 1, Page 338) and County Surveyor A. C. Stuntz also worked in this section back on May 7th, 1882 (Volume 1, Page 463) and on March 22nd, 1887 (Volume 2, Page 25). During all of the work that had been performed as listed, the accepted method for the location of the Center of Section was by the current Federal Method (straight lines connecting the corresponding opposite quarter corners). I located several interior fence lines and fence corners to see if some other form of locating the center may have been used. I concluded that the Federal Method best fits the rest of the occupation lines and set the Center of Section at the intersection of straight lines connecting the corresponding opposite quarter corners.
